

CS4366: Senior Capstone Project Fall 2026

Stage 1: Software Requirements Specification (SRS)

- Release date: Sept 10, 2026
 - Due date: Sept 27 (Sunday) before 11:59 PM
 - Submit report (e.g., PDF) and presentation slides (e.g., PowerPoint) files through Canvas.
 - Submit the URL of your group webpage that should include:
 - Group members and their roles
 - Group meetings and activities
 - Upcoming schedules
 - The file names should include the stage and group_name, "stage#_group_name". For example, stage1_MyGroup.pdf and stage1_MyGroup.pptx.
- Total score 25%
- Type all your team members' FULL names in the cover pages of the project report and presentation slides.
- NO hand-written project report will be accepted.

Description

Analyze potential target users and identify any function and performance requirement of your system.

(i) First, in order to analyze the users, interview (e.g., zoom, call, email, etc.) at least four or five users who are not taking CS4366. Be specific about the users, for example range of age, culture, computer/IT experience, attitude, and anything you may think important. Prepare several questions and log interviews (multiple pages) and summarize them (half page). (ii) Refer to IEEE Std 830-1998 (IEEE Recommended Practice for Software Requirements Specifications; pp.11 – 20 only) and fill out each section/sub-section. If a section/sub-section is not related to your project scope, you can skip (e.g., 5.2.1.3 Hardware Interface). Here, you should explain why you skipped it. (iii) In order to fill out sections/sub-sections (e.g., 5.3.2 Functions), you should identify the existing functions, and suggest new functions and their features. List all the functions that your system should support. Consider any data requirement and data input/output of your system. Explain in as much detail as possible, for example, function environment, constraint, trade-off, and anything you may think important.

Deliverables

In this project, you should

- Submit a PDF in IEEE conference format (two-column, 10 pt, letter size), minimum two pages excluding appendices. The report must include:
 - Project description and motivation (1 or 2 paragraphs)
 - Interview summary (half page). Full interview log goes in an appendix, which may be single-column.
 - SRS based on the IEEE Std 830-1998
 - Project plan (bullet points): based on your interview findings, list the modules or features you will build with a brief explanation of each
- Prepare a 10 – 15 minute presentation accordingly and present your system and receive feedback from the instructor and other classmates during the class. The presentation schedule will be announced later.

Grading policy

Your project report and presentation should look professional in the sense of completeness, clarity, consistency, and labeling. You should use pictures, graphs, and tables if they can help. You will be evaluated based on the following:

- Quality/Clarity of requirement specification
- Quality of interview questions and summary
- Quality of project report
- Quality of presentation (10 - 15 minutes)
